

# HAIRPIN FENCE INSTALLATION INSTRUCTIONS.

*Thank you for your purchase!*

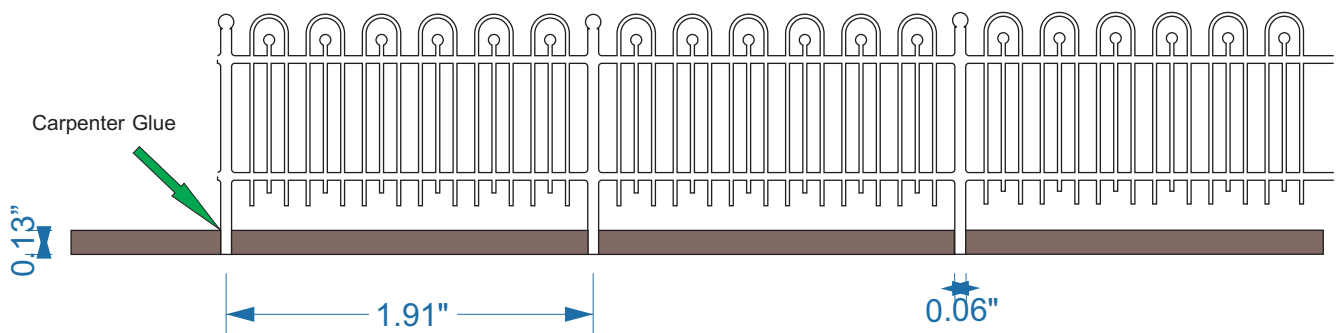

The Hairpin Fence is easy to paint and install.

We recommend to paint them before remove it from the sheet. Flat black paint will be a good option.

## Installation:

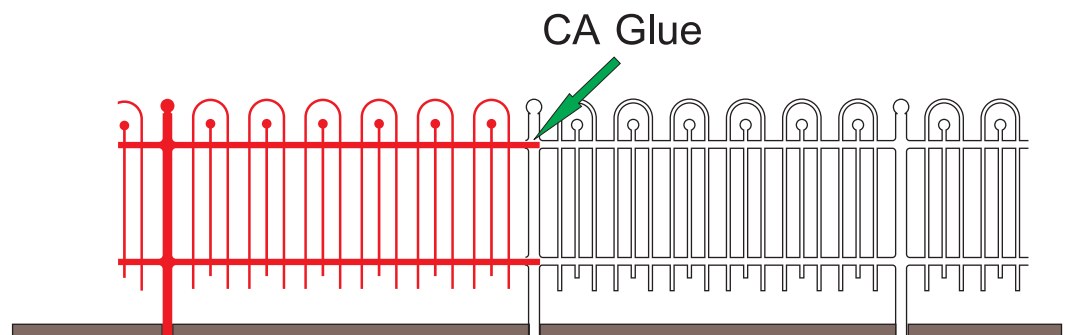

Drill three holes, using a 1/16" drill bit separated by 1.91". We recommend to use the same fence to mark the hole position.

Apply carpenter glue and insert the fence post into each hole approximately 0.125" deep and keep it perpendicular to the surface until dry.

## Multiples fences:

After drill all the necessary holes to install the fences, proceed to install them together. Each ends is the continuity of the next one. Using a small amount of CA glue connect them as show in the picture.
